USB DAP Quick Install

(Full installation guide in *DAPtools Software* manuals)

1. Verify that all parts are available.
   xDAP - power cord - USB cable

2. Verify that you have current software:

mstarlabs.com/software/new.html

- *Windows*:   XP, Vista, Server 2008, 7, 8, 10,
- *DAPtools*:   Basic, Standard, Professional

3. Install software.
 - Run setup.exe from DAPcell installer medium
 - Click "Getting Started" and review briefly
 - Select "Install DAPcell Server"

   Accept suggested install locations
   Review and approve choices
   Wait for software to install
   Accept default driver stub option
   Wait for enumeration of DAP devices
   Select "Finish"

 - Exit the setup application.
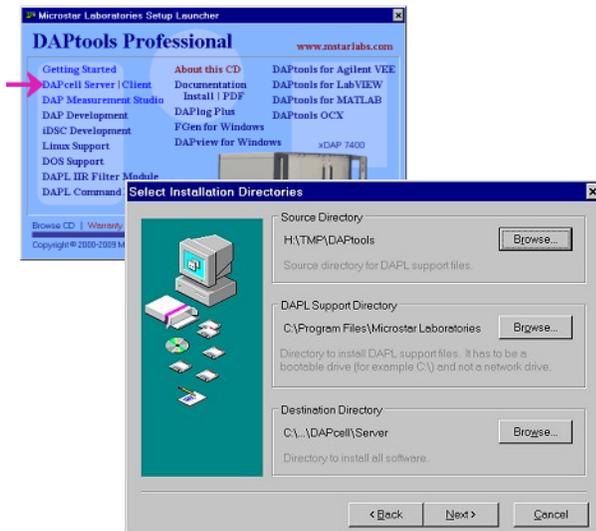

4. Install xDAP hardware.
 - Attach USB cable to xDAP front socket
 - Attach USB cable to host USB port
 - Attach power cord to outlet
 - Attach power cord to xDAP rear panel
 - Turn on power switch on xDAP rear panel
 - Press power/standby switch on xDAP front panel

5. Verify xDAP configuration.
 - Let Windows recognize and install new devices
 - Run *Data Acquisition* in the Windows Control Panel
 - Under "control tab," verify that the DAP server is running
 - Under "browser tab," verify that xDAPs are detected.
   If not ---
      reboot system, and repeat "Verify xDAP configuration"
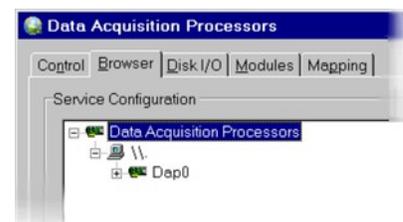

6. Power down, and install signal cables.
